SBP 200 Plus cool

HEATING BUFFER CYLINDER

PRODUCT-NO.: 205295

The all-rounder for your heat pump

This buffer cylinder is the perfect complement to your heat pump. It stores and delivers pleasant heat to keep your family home nice and warm. If your heat pump is also designed for cooling operation, the cylinder also stores the water required for this.

In the upper section of the cylinder, it is possible to install an electric threaded immersion heater for electric reheating. A second connector allows the installation of a further electric threaded immersion heater for charging the buffer cylinder. This lets you increase self-consumption of electricity from your photovoltaic system, for example.

The main features

- Buffer cylinder for different heat pumps
- Can also be used for cooling
- Highly effective thermal insulation
- Connector for an electric threaded immersion heater in both the upper and lower third of the cylinder

Type	SBP 200 Plus cool
Part no.	205295

Technical data

Standby energy consumption/24 h at 65 °C	1.235 kWh
Nominal capacity	207 l
Height	1510 mm
Height when tilted	1637 mm

Installation information

Please ask your local power supply utility or a registered electrician to install appliances that are not fully wired, i.e. ready to plug in. The electrician should also be able to assist you with obtaining the agreement of the respective power supply utility required for the appliance installation.
