

FET

PRODUCT-NO.: 234723

Targeted control – planned expansion. The heat pump manager system is a radical new control concept. The comprehensive functions of the standard module can be extended with an additional module and this remote control. All of these components can be conveniently connected to one another via the system bus. The heat pump manager is the central control unit of the system, its integral programming unit is able to regulate numerous functions, such as a cascade of two heat pumps or the control of one direct heating circuit and two heating circuits with mixer. Through module extension, a further four heat pumps and two further heating circuits with mixer can also be controlled. These heating circuits (five in total) can each be controlled with this remote control. The components combine functionality, extendibility and ease of installation. All the modules feature the attractive new design and have significantly improved connections for the electrical installation components.

The main features

Room based remote control with thermostat function for the heat pump manager

Simple, intuitive operation via Touch-Wheel with matrix display

Display for room temperature and relative humidity

Easy adjustment of the comfort temperature

Type	FET
Part no.	234723

Technical data

Width	145 mm
Height	96 mm
Depth	31 mm

Installation information

Please ask your local power supply utility or a registered electrician to install appliances that are not fully wired, i.e. ready to plug in. The electrician should also be able to assist you with obtaining the agreement of the respective power supply utility required for the appliance installation.
